Forward

This is *not* a full thesis template! It only demonstrates how to create per-chapter references using the `chapterbib` package with BibTeX. (Do not use with BibLaTeX!)

Each chapter must be in its own `.tex` file and `include`-d into the main `.tex` file. If compiling on your own machine, run `bibtex` on *each* generated `.aux` file, before running `pdflatex` twice more. (These are done automatically on Overleaf.)
